Casablanca, May 12 2023

Recruiting Coordinator  
Capgemini Engineering  
97 FREYR STREET  
34000 MONTPELLIER

Dear Sir, Madam,

I am writing to apply for the Data Analyst position at Capgemini in Montpellier, as advertised on your website and on Indeed. With my extensive experience in data analysis, statistical modeling, and data visualization, I am confident in my ability to make a valuable contribution to your team.

As someone with a lifetime love of relational mathematics and pattern recognition, I thrive on digging into complex data sets and producing insightful, data-driven strategic recommendations. I'm eager to turn my talent for analyzing big data into actionable growth strategies for Capgemini. Although I recently graduated with my state engineering degree in big data and cloud computing, I have developed a strong foundation in data manipulation, data cleaning, and exploratory data analysis. My expertise in programming languages such as Python, Java, SQL, and R allows me to perform complex data analysis tasks with ease and efficiency. I am also proficient in data visualization tools such as Tableau and Power BI, which enable me to present insights and trends to both technical and non-technical audiences.

At Capgemini, I am particularly drawn to your reputation for excellence in data analytics, and I believe that my skills and experience align perfectly with the requirements of the Data Analyst position. I am excited about the opportunity to work with a dynamic and forward-thinking team, and to contribute my analytical and problem-solving skills to help drive business success.

Please find attached my CV for your consideration. I look forward to having the opportunity to continue to make my case in an interview.

Sincerely,

Y.ET-TAOUDI
